高二217 第二次定期評量考試科目及範圍

	(HL only)
	-Adhesion of cells to form tissues (HL only)
	D2.3 Water Potential
	-Solvation with water as the solvent
	-Water movement from less concentrated to more concentrated solutions
	- Water movement by osmosis into or out of cells
	-Changes due to water movement in plant tissue bathed in hypotonic and hypertonic
	solutions
	-Effects of water movement on cells that lack a cell wall
	- Effects of water movement on cells with a cell wall
	-Medical applications of isotonic solutions
